The Center for Business Development and Research is the research and continuing education arm of the University of Idaho's College of Business and Economics. The Center administers a management education workshop and seminar series, faculty research programs, and the publication of *Centerpoint*, the *Manufacturing Directory of Idaho*, *Idaho Statistical Abstract*, and the Journal Paper Series. Inquiries concerning our publications should be addressed to George M. Armstrong, editor; inquiries about our management development programs should be directed to Alice Pope, management development specialist. Persons interested in College of Business and Economics contract research capabilities should contact Lawrence H. Merk, Center Director. Our address is: Center for Business Development and Research, College of Business and Economics, University of Idaho, Moscow, Idaho 83843. Our phone number is: (208) 885-6611.

To the Reader

The decision to publish a new Idaho Statistical Abstract was made early in 1979 and data gathering began late that spring and has continued to date. Thus the new edition covers roughly the decade since 1970 when Norman Nybroten began data gathering for the 1971 edition. (An earlier edition was published in 1966; we hope that future editions will be produced at shorter intervals.)

One of the perennial problems of both statisticians and publishers of an Abstract such as this is the considerable time-lag between the initial generation and compilation of data and the availability of data in published form. Naturally this is extended when compilation of an *abstract* of the mass of data available is contemplated. To the extent feasible, this Abstract attempts to balance the natural desire of the researcher to be as inclusive and up-to-date as possible against the time and cost imperatives that govern the data-gathering and publication processes.

Thus, most data tend to become somewhat "dated" soon after publication in a volume such as this. Indeed, there are several tables which can be up-dated presently! However, the desire for continuous up-dating has to be weighed against the delays in getting the "product" finalized. Thus, the researcher must arbitrarily establish a "cut-off" date beyond which data-gathering efforts must give way to other phases of the task.

For readers familiar with the first and second editions of the Abstract, a glance at the Table of Contents will reveal some differences in the numbering of the chapters, their coverage, and their titles. For example, it was felt that the 1971 edition's Chapter II contents would be more accessible if separated into smaller, more specific chapters: "Population," "Education," and "Vital Statistics" (to the last we added the clearly related subject, "Health"). Further, Chapter III of the 1971 edition has been split into two more manageable chapters: "Employment, Earnings, and Public Welfare" and "Income." Similarly the former "Government and Elections" chapter was split into its political component, "Elections," and the fiscal role of the public sector, "State and Local Government Finance and Employment." The 1971 edition's "Fish and Game" chapter was expanded to include data on other aspects of recreational activities in Idaho, reflecting the growing importance of this sector of the economy; the name was changed correspondingly to "Parks and Recreation."

An attempt has also been made to create a balance in the *subject* coverage of the book, in the hope of making it serve the needs of potential users effectively. Further, we have attempted to reflect the historical and demographic matrices in which we live: historical, regional and national statistics have been included where appropriate and available.

A number of substantial points about the composition of the book need to be brought to the reader's attention. The placement of both general *classes* of data and of *individual tables* within chapters may appear somewhat arbitrary. Certain tables on land use, for example, might well have gone into either Chapter I ("Land, Water, and Climate") *or* Chapter IX ("Agriculture"). Likewise, certain statistics on income taxation could have been fitted into Chapters VII ("Income"), VIII ("Employment, Earnings, and Public Welfare"), or XVII ("State and Local Government Finance and Employment"). The order of placement of tables on certain *pages* within chapters may also be one place "out" of the most logical or traditional sequence.

In the first instance, a judgment was made concerning what seemed the most logical placement of blocks of data for the most frequent users. Naturally *some* users will find that a somewhat different arrangement would have suited their needs a bit better. Second, regarding the placement of individual tables, cost factors sometimes dictated that smaller tables be consolidated with "continued" or partial-page tables into one full page to avoid wasting paper and to minimize costs of printing and postage.

Cost and other factors also affected the book's physical layout, causing a discontinuity in table and type size in some chapters where large tables or several smaller ones were photographically reduced to fit a single page. While not the most aesthetically pleasing solution, other alternatives were wasteful and often would have required that a table be continued or read "around the corner." In such cases we opted for lower cost and/or greater readability and comprehension rather than uniformity of table and print size. Readers may also notice minor disconformities in the tables' typeface and notation style in several chapters. This is material that was photocopied and reproduced "as is" from other published sources. In such cases it was decided that keeping the material intact would avoid even the possibility of errors "creeping in" during retyping: a desire for accuracy overrode a desire for uniformity. Likewise, we attempted to include the latest complete and accurate data in any given topic, not necessarily the "latest data." Historical data were usually included only "back" far enough to overlap, inasmuch as possible, the coverage of similar data in the Second Edition.

It was possible to include some data from the 1977 U.S. Census on various topics; some of these data became available during late 1979 and early 1980. Thus, Chapter XVI ("Trade: Retail, Wholesale, and Selected Services") includes several tables from the 1977 Census volumes on these topics. However, at press time, data in similar detail and coverage were not available for Chapter XIII ("Manufacturing"). It is worth pointing out that there is typically a 2-3 year lag between the Census year and the actual availability of published volumes of Census data.

Compared to the previous editions, several tables have been deleted and others added. Also, for the sake of reducing costs, it was decided to exclude any maps or figures from this edition, even though it is realized that some users would have found them helpful. The present edition is expanded and improved in comparison to the preceding volumes. There are 18 chapters and 385 tables, compared to 13 chapters and 285 figures and tables in the 1971 edition.

We believe this Abstract should prove useful to individuals, officials, and agencies in both the public and private sectors in Idaho and elsewhere. We recognize, however, that no single user will be completely served by this volume--it is but an *abstract* of the potentially available data. Source references should give users adequate leads to enable them to enlarge upon the summary data contained here.

In the interest of improving the quality and coverage of the future editions of this Abstract, we would appreciate readers' reaction and constructive criticism regarding this Third Edition. Information about reader use (including new sources of data, corrections, and comments on any content areas that should be strengthened) would be especially helpful; letters should be addressed to Idaho Statistical Abstract, Center for Business Development and Research, College of Business and Economics, University of Idaho, Moscow, ID 83843.

Special credit should be given to a major source for Chapter XI, "Forestry:" Idaho's Wildland Resources: Availability and Use, by James Pizzadili and Charles McKetta, published in August 1979 by the University of Idaho Forest, Wildlife and Range Experiment Station as their "Miscellaneous Publication No. 8." Several tables in this chapter were photocopied from this source with the kind permission of the authors.

Similar volumes for some other states have been particularly useful--in terms of format, organization, and sources of data--especially: (1) Michigan Statistical Abstract, 1978, 13th Edition, Division of Research, Graduate School of Business Administration, Michigan State University, East

Lansing; (2) Kansas Statistical Abstract, 1976, Institute for Social and Environmental Studies, University of Kansas, Lawrence; and (3) 1976 Statistical Abstract of Utah, Bureau of Economics and Business Research, College of Business, University of Utah, Salt Lake City. Further, the previous editions of the Idaho Statistical Abstract, authored by Dr. Norman Nybroten, proved extremely useful guides for this edition.

Actual data gathering for this volume was supported by a summer grant and other funds from the Center for Business Development and Research. Michel Czehatowski proved to be a very effective and dedicated research assistant; he helped in gathering and compiling much of the data, aided very admirably by Connie Bollinger. Mike Armstrong edited the manuscript and supervised composition of the book. The tables were typed and pasted up by Suzanne Wiese, Bonnie Milligan, Deborah Owens, Nona Pristupa, and Katy McCarthy. Mike Armstrong, Michel Czehatowski, Suzanne Wiese, and Deborah Owens proofread. Special thanks are due all these individuals. The book was printed and bound by University of Idaho Duplication Services, supervised by Marjory Knott; cover design is by Leo Ames of University of Idaho Publications.

[a] Includes all irrigated land and any tilled dry land. Irrigated pasture is included in this category.

[b] Any land having at least a 10 percent tree canopy.

[c] All non-irrigated lands on which vegetative cover is predominantly native or introduced plants used for grazing.

[d] Includes all urban built-up areas, roads, farmsteads, and lands not suitable for agricultural use.

POTENTIALLY IRRIGABLE LANDS IN IDAHO, 1976 (acres)

Basin	Class 1[a]	Class 2[b]	Class 3[c]	Total
Panhandle	40,370	206,140	269,950	516,460
Snake	1,112,500	3,100,200	3,184,700	7,399,400

TOTAL	1,218,850	3,733,552	3,628,570	8,580,972

[a] Class 1 lands are the most suitable for irrigation. These lands are well drained, with smooth topography, and have soils mostly of fine sandy loams and permeable clay loams.

[b] Class 2 lands have moderate limitations for irrigated agriculture. Rolling topography and gravel and cobble in the soil are characteristic limiting factors.

[c] Class 3 lands are generally like Class 2 lands but with more severe limitations for irrigated agriculture.

[1] Numbers in columns represent the degree of recreational impairment for each lake. Minimum impairment per category is 1 and highest is 3; therefore, final rating ranges from a total of 4 for little or no impairment to 12 for maximum impairment of all recreational categories.

[2] Interpretation of rating scores is as follows: 4--no uses impaired; 5-8--all uses moderately impaired; 9-8--all uses significantly impaired.

[1] Index numbers have been "read off" from a graph given in the source, p. 15.
Each index is based on 11 criteria/parameter groups (e.g., acidity or alkalinity, bacteria, toxicity, radioactivity, solids, etc.). It can range from 0.0 (no measured evidence of pollution) to a theoretical maximum of 110.0 (severe pollution in all eleven groups). All Northwest rivers fall below a WQI of 30. See source for more details.

[2] Except where indicated, those portions included in the WQI value are on the mainstream of each stream.

[1] Almost all private schools in Idaho are parochial.

[2] Kindergarten enrollment began to be counted in 1973-74. This number has grown rapidly (particularly after state reimbursement for kindergarten was approvd beginning fiscal 1975-76). This growth accounts for a large percentage of enrollment increase since that time.

[3] For 1969-72 period, figures include a small share of enrollments for first-second grade transitionals, ungraded migrants, and other elementary ungraded pupils.

[4] Includes elementary enrollments for 1961 and 1962.

[5] Refers to end-of-school year graduates. For example, 13,432 graduated at end of 1978-79 school year.

[6] Live births in the birth year.

*The reason contract funds received differ from total funds expended is because on some years the balance was carried forward making total funds available a larger amount than contract funds received. Example: Funds expended in 1977-78 = $362,034; contract funds received in 1977-78 = $302,764; difference $59,270 carried forward from previous year.

[a] Does not include $54,774,490 in recreation expenditures which could not be categorized or prorated to any particular county. Most of these expenditures were made by State and quasi public agencies on a statewide basis.

[b] Per capita expenditures are distorted due to low permanent populations while at the same time attracting large numbers of tourists and outdoor recreationists.

[1] Money income as defined by the Bureau of Commerce differs from the concept of "Personal Income", as usually defined. Money income is income before the deduction of income taxes and social security taxes, and includes any items of non-money income. None of the national-income accounting aggregates is exactly comparable with money income, although personal income is the closest.

[2] Based on 1960 and 1970 Census of Population.

[3] Median family income data based on 1975 Survey of Income and Education.

[4] Per capita income data based on money income estimates developed for Federal tax revenue-sharing allocations.

[b] Since windthrow and breakage are usually related to incidence of root rots and heart rot, these figures are included in the totals.

[c] These values are estimates only; they are, however, felt to be very conservative.

1978	8,682	37,648	20,127	59,528	2,005

[x] Data beginning 1973 are not directly comparable with data for previous years due to changes in area coverage.

[*] According to the First Security Corporation (Salt Lake City) these statistics are underestimates; for example, based on Idaho's 54 locations for which this bank gathers statistics, the comparable 1978 figure is 9,605 (vs. 8,682 from the above Federal Reserve source). However, these data provide a comparative picture of residential building activity over time in Idaho as well as the region.

[1] Fabricated metals products: Nez Perce County is the only county with one establishment employing 100 and over.

Note: No manufacturing activity reported in Clark County. Relevant details for transportation equipment (one of the several industry groups not shown in table) are as follows: 20 establishments in the state--12 in Ada County, 9 with 1-19 employees, 2 with 20-99, and one with 100 and over; 6 in Canyon County, one with 1-19, 3 with 20-99, and 2 with 100 and over, and two in Payette County, one each with 1-19 and 100 and over employees.

[1] According to Mr. L. P. Sheesley, conversation dated August 2, 1979, Planning Supervisor, Idaho Transportation Department, the main reasons why the county-wide data given here do not reconcile with the time-series data in the preceding table from a Federal government source are: (1) "passenger cars" data include pick-up trucks under 8000 pounds, whereas the Federal data on Automobiles do not include these vehicles; (2) Buses--data given here include buses operating in interstate passenger transportation, whereas they are not part of the Federal data, and (3) Trucks--figures in this table do not include pick-up trucks under 8000 pounds--they are part of the Federal data, however.

*Based on sample data in each county.

[1] Regression Index not given for 1975.

[2] Lower this coefficient, greater the assessment uniformity.

[3] Based on Residential and Rural Subdivision data only; indicates whether equal fairness of appraisal is being shown to both high and low valued properties.

0.95-1.05 indicates equal treatment: above 1.05, higher value properties are given an advantage; below 0.95, lower value properties have an advantage.

TABLE XVII-43

SELECTED INDICATORS OF PROPERTY TAX ASSESSMENT, QUALITY AND MEDIAN EFFECTIVE PROPERTY TAX RATES FOR THE LARGEST CITY: IDAHO, REGION, AND ALL STATES, 1976

(Single-Family, Non-Farm Homes)

	ASSESSMENT RATIO (% AV to sales price)	ASSESSMENT UNIFORMITY[1]		MEDIAN EFFECTIVE TAX RATE FOR LARGEST CITY IN STATE[2,3]
		Coeff. of Intra-Area Difference (%)	Coeff. of Inter-Area Difference (%)	
ALL STATES	32.5	25.8	15	1.52
IDAHO	9.4	27.1	18	1.52
Montana	5.9	41.1	15	1.34
Oregon	75.4	19.8	4	2.34
Utah	13.2	30.1	14	0.91
Washington	64.4	22.9	13	0.88
Wyoming	10.1	39.9	15	–

[1] These measures reflect the quality of assessment; the smaller the percentage, the better the quality. Intra- and inter-area coefficients reveal assessment quality within and among property tax districts.

[2] Effective rate is tax billing as a percentage of the sales price.

[3] Relevant largest cities are: Boise, Idaho; Billings, Montana; Portland, Oregon; Salt Lake City, Utah; and Seattle, Washington. Information not available for Cheyenne, Wyoming.

[1] Potential tax yield, Amount Collected and Amount Collected Less Potential Yield are in thousands of dollars. Per Capita is in dollars.

[2] Tax capacity is measured on the basis of a "representative" tax system for the nation. Potential tax yield is the amount each state could generate on the basis of the "representative" tax system. Capacity index relates each state's capacity to the nation's (typical state) capacity based on the "representative" system, and tax effort index reveals how effectively each state utilized its capacity.

[1] Dollar outlays by the executive branch only, excludes the judiciary and legislative. Totals include civilian and military pay, contracts, grants, and transfer payments such as Social Security and veterans benefits to individuals and revenue sharing to state and local governments. Most government contracts are reported as obligations or funds legally set aside to be spent, not actual expenditures. Expenditures may take place over a period of years. Also, contracts reflect the location of the prime contractor and are not adjusted to allow for subcontracting.

[2] Includes military and civilian payrolls, military retirement pay, and prime contracts for military and civilian functions of the Department of Defense, such as contracts by the U.S. Army Corps of Engineers.
